To whom it may concern,

Hello my name Damien!

I am currently a Environmental Field Tech for Target Emissions/ Montrose Environmental Group. I work with the LDAR program as a third party contractor locating leaks throughout the plant to ensure EPA regulations are met. Although I have been employed here for 2 years, I've decided that I wanted a more fulfilling role in my career path.

This year in August I completed my full stack coding bootcamp through Rice University. There I learned a vast amount with regards to front end development as well as back end development. From hours of debugging JavaScript code to building tables through MySQL and MongoDB.

Saying this is one of the hardest yet fulfilling things I've done would be an understatement.

Though I am new to web development, I hope the skills detailed in my resume meets all the requirements you're looking for. I am eager and excited to start this new career path and meet the challenges that are ahead.

Hoping to hear from you soon!

Best regards,

Skills

- Proficient in front end languages such as HTML, CSS, JavaScript and React.js
- JavaScript back end languages using Node.js and Express.js
- Proficient in utilizing MySQL to maintain/update databases as well as using NoSQL databases such as MongoDB and GraphQL
- Have a well understanding with processing requests from server using Express.js Frameworks
- Working on group projects while asynchronous within a group setting via Zoom
- Quality control analysis regarding documentation of components within field
- Conducting tests and inspections of products, services, or processes to evaluate quality or performance.
- Troubleshooting and calibrating instruments to match leak thresholds
- Instruct safety meetings prior to field work
- Communicating with operators and technicians in the field
- Notifying instrument technicians of leaks throughout chemical plant

Experience:

Sept 8, 2020 – currently employed

Target Emissions/ Montrose Environmental Group

Freeport, Tx
